

Revolution Acoustics Introduces the Pendant360™

New product reinvents the pendant speaker class with 360 degree immersive audio and a low-profile, unobtrusive mount

July 5, 2018

Montreal, Canada – Revolution Acoustics has introduced the patent pending Pendant360™, a pendant speaker which brings Revolution’s planar wave audio technology to installations with open plenum spaces. Designed for indoor or outdoor use, the Pendant360 is an ultra-low-profile, paintable, pendant mount for the SSP6 Multiducer. Unlike other pendant speakers which use traditional cone-type

loudspeaker technology, the Pendant360 provides 360 degree, immersive audio which more effectively covers the space below with constant-SPL, high-intelligibility audio. The Pendant360 may also be mounted horizontally, enabling installation on poles or other open-wall structures.

“The Pendant360 is the only pendant speaker on the market that gives you consistent sound quality and frequency response no matter where you are standing or sitting,” said Bob Katz, Revolution Acoustics CEO, “and its small footprint and flat, paintable surface allows it to disappear into its surroundings. As with our

SSP6 multiducer, the Pendant360 gives you superior coverage with fewer units, and installation is fast and simple. It’s a cost-effective way to bring revolutionary audio quality to any installed listening environment.”

Each Pendant360™ unit measures only 13.8” x 13.8” x 0.6” and provides a mount for one SSP6 Multiducer. Applications include retail, workspaces, restaurants and bars, sound masking, background music, paging/notification and more. Visit revolutionacoustics.com for more information.
