

Revolution SSP6 Resets Invisible Speaker Market

BOOTH 6422 Invisible is the new form factor in audio. Clients want toast, not the toaster. As exciting as the thought of seamless invisible speakers may be, the actual rendering has not necessarily met expectation to date. Until now. Resolving major shortcomings such as lack of fidelity and bass, very difficult installation, cost, and lack of power, Revolution Acoustics' patented SSP6 hits the reset on the entire Invisible speaker sector.

More than an invisible speaker solution, the "Revolution" is being able to generate precisely the correct full spectrum source signal at constant sound pressure levels everywhere, and for

Revolution Audio's SSP6

the very first time. Cone type speakers are hot point sources, and will always be fraught with off axis losses, and logarithmic roll off. Now imagine: zero off axis losses. Imagine: no logarithmic roll off. Using T-DML Loudspeaker Physics, Revolution Acoustics has changed the rules of the game and the UX (user experience) forever. Invisible, made easy.

A five-minute installation brings room filling immersive audio like no other technology available. Staging and imaging rendered whole room sweet spots. Priced for mid-tier residential markets, installations include ultra high end residences, mega yachts, as well as a myriad of commercial applications.
